"What is this?"

**Pondering** 

Winter's

Wonders

by Colleen Scott,

desk, or whether it'll be dead or alive. So, after reading the attached query, I opened the bag with caution. Well, the aroma was not offensive. (You should have smelled the fungi that sat in an airtight bag, on my desk, for an entire weekend.)

At first, being detached from its former environment made this surreal cross between a tent caterpillar's shelter and an oriole's nest unfamiliar. Then, it dawned on me. Webworms! After hatching during the summer and before crawling away to pupate, the fall webworm moth caterpillar weaves and eats its

way around the ends of tree or shrub branches leaving behind a webbed conglomeration of leaf skeletons, feces and molts which often lasts into the winter.

Webworms are not the only insects of which we find evidence during the winter. Hundreds of insects like wasps and flies lay their eggs on different host plants and trees. (The most common host is the oak tree.) The plant or tree responds by forming a sort of scar tissue or deformity called a gall which, during the winter, protects the eggs. Galls come in

numerous shapes, colors, sizes and textures. Some are oval, pink, fuzzy and about the size of a pea. Some are round, smooth, tan and the size of ping-pong balls.

Thankfully, invertebrate shelters are not the only remnants left to ponder during cold months. In fact, winter is an excellent time of year during which numerous natural wonders can be explored. Take animal tracks for instance. In fact, snow (or mud) provides an excellent medium from which clues are gathered.

First, look for clear individual tracks. How many toes does the animal have? Is the animal a plantigrade walking on its entire foot? Or, is the animal a digitigrade walking on its toes? If the tracks are not clear, follow the trail to determine what the animal's pattern is. How long is the stride? How wide is the straddle? Also, be observant of other signs. What materials are visible in nearby feces? What other clues do you see?

naturalist never knows what will show up on his or her Animal footprints are not the only items worthy of investigation. After the leaves have long fallen, browse (food) is also much more apparent. For example, during snowy or icy weather when green vegetation is not available, rabbits and deer will feed on woody twig tips leaving two very different marks. Because cottontails have two pair of incisors (front teeth) on the upper jaw and one pair on the lower jaw, they are able to "nip" the twig end leaving a clean 45-degree-angle cut. White-tails, on the other hand, have no upper incisors. They grasp the twig, jerking their heads up and away, leaving behind a ragged end.

> In addition to tracks, browse and a myriad of other animal signs which are rendered conspicuous by Missouri's winter, there are always holes in the ground. As common as they are and as boring as they may sound, there is fun in discovering who made a particular hole and who its current resident is.

Many Missouri mammals, from shrews to black bear, dig or use dens. When identifying burrows, size and habitat are the first considerations. Chipmunk holes, for example, are about two inches in diameter with no signs of excavation and

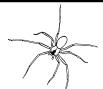

are usually located in or near woods. Groundhog burrow entrances, on the other hand, are about six inches in diameter with a mound of dirt in front of the hole and are located away from water. Fox dens, commonly, are abandoned groundhog burrows that the canid has renovated by increasing the size of the entrance several inches. The list goes on.

If you're lucky, you'll have an experienced companion to learn from and share a long list of discoveries with. Or, maybe you're the experienced companion. Either way, there are plenty of books and field guides available at your local library and Powder Valley Conservation Nature Center to aid your investigation during the cold, invigorating days of February. Exercise your curiosity. Get outside and enjoy!

### POISONOUS THINGS Scout Discovery Table

Saturday, February 3, 2002 10:00 a.m. - 2:00 p.m.

A ttention, Scouts! What's the difference between the terms "venomous" and "poisonous?" How many different kinds of venomous snakes make Missouri their home? How can you identify poison ivy? What poisonous spider has a "fiddle" on its back?

Learn the answers to these questions and more by visiting the Poisonous Things Scout Discovery Table at Powder Valley. This table is specially designed to help certain scouts accomplish parts of specific badges. "Poisonous Things" applies to: Junior Girl Scouts' "Let's Get Outdoors: Wildlife #5" and "Plants and Animals #9"; Wolves' "Outdoor Adventure (Elective 18g)", and Webelos' "Outdoor Group: Naturalist #6."

Here's your chance to have fun, learn something and work on that badge!

No reservations required.

Wednesday, February 13, 2002 7:00 p.m. - 9:30 p.m.

Powder Valley Conservation Nature Center and Missouri Smallmouth Bass Alliance invite you to come and spend an evening with Dan Gapen. He will be speaking on many things, including lake/stream layouts and where smallmouth bass prefer to hang out. There will be numerous brochures of interest available.

Please call (314) 301-1500 beginning January 30 for a reservation.

Did vou know?

It takes at least 40

gallons of tree sap

to make **one** gallon

of syrup!

### The Educators' Niche by Barb Sandhagen, Education Program Coordinator

### A Breakfast Tale

It's a bright sunny winter morning. You feel the warmth from the fire blazing in the fireplace. The savory smell of bacon frying wafts through the air. Just then you hear the first buttermilk pancake sizzle on the hot griddle! The telltale bubbles tell you it's time to flip the pancake you've carefully made from your grandmother's "hand-me-down" recipe. The coffee is ready, the bacon awaits. The first drop of syrup

ready, the bacon awaits. The first drop of syrup is about to hit your melting butter pile on top of the golden brown pancakes. But, WAIT. . . just as that drop meets the top pancake, your eye catches words on the label like, "potassium sorbate, high fructose corn syrup, caramel color, cellulose gum and natural and artificial flavors."

You've gone to all the trouble to make sure everything is just right! Great homemade pancakes, bacon cooked to perfection, butter instead of margarine, fresh brewed coffee from beans ground just that morning. Wouldn't you rather see the words "Pure Maple Syrup, No Additives or Preservatives" on the label??

If you've never tried "the real thing," it's time to give it a try! It's hard to describe the "yum" your taste buds will experience when you try "real maple syrup" on homemade pancakes. You'll find that even though you may pay more for pure maple syrup, once you've tried it, it will be difficult to return to the brown colored corn syrup.

You probably associate anything to do with maple syrup with states like Vermont or Maine. Did you know that right here in your own "backyard" you can sample the flavors of the forest? Would you like to learn the process of maple sugaring and see if you can do it at your school or at home?

All you need to do is call David Bruns, Conservation Education Consultant, at (636) 458-2236. Tell him you would like to sign up for a Teacher and Youth Leader Workshop on February 6 from 4:00 to 6:00 p.m. at Rockwoods Reservation to experience Maple Sugaring "Missouri style!"

### Weather Lore

by Shanna Raeker, Naturalist

revery February, people anxiously await the groundhog's endeavor. Will he see his shadow and curse us with six more weeks of winter, or will he predict an early spring? Most people don't put much stock into whether or not the groundhog sees his shadow, but don't be too quick to judge other weather sayings. Although much weather lore is fictitious, some has an element of truth.

Weather lore is most accurate when it applies to short-range local weather. When a weatherman makes a forecast, he is predicting the weather for a large geographic area for several hours at a time. It only makes sense that the weather will change over time and make this forecast inaccurate. Weather lore that uses the current conditions at a specific location to predict the weather should be more accurate.

Most weather lore can be easily identified as fact or fiction by determining if it makes logical sense. For example, one weather saying states that a silver maple shows the lining of its leaves before a storm. If you think about what happens before a storm, you realize that this saying could hold true. Before a storm comes, the wind usually starts blowing stronger which in turn makes the leaves of many trees show their underside. In contrast, there is no reasonable explanation for a groundhog predicting a longer winter merely because he saw his shadow.

Even the most logical weather sayings can fail. After all, if we could truly predict the future we'd be rich and famous. Either way it's still fun to keep track to see if the predictions come true. So what do you think will come from Punxsutawney Phil's forecast this year?

You may not know it, but Missouri is home to 14 different kinds (or species) of bats. Bats are mammals and share characteristics common to other mammals such as teeth, fur, and milk or mammary

glands. All of the bats in Missouri eat insects that they catch in mid-air. Through examination of bat droppings, the kinds of insects the bats are eating can be identified. Some bats are picky about what they eat and may eat mostly one kind of insect, but many will eat one or more of the following insects: mayflies, mosquitoes, beetles, caddis flies, lace-winged flies, moths, leafhoppers, houseflies, cicadas, flying ants, weevils, dragonflies and wasps. The amount of insects consumed by bats is surprisingly significant and therefore bats play a very important role in controlling populations of night flying insects. For example, one little brown bat can eat more than 1,000 mosquito-sized insects in an hour!

In late fall when flying insects are less abundant, the bats must either hibernate or migrate. Most choose to hibernate in caves, mines, hollows of trees, buildings or deep within the crevices of cliffs. A few of our Missouri species migrate to locations where insects are again plentiful. No matter which strategy they use for surviving a Missouri winter, they all return or emerge in early spring and raise their young here. So, from as early as February and all through the summer and fall months, bats can be seen flying in areas where insects are abundant. Happy viewing!

St. Charles, MO 63304 (636) 441 - 4554

### **LOCATION:**

From Hwy 40, take 94 south to Hwy D; turn west on D for approx. 1 mile. From I-70, take 94/First Capitol exit; turn south on Hwy 94 to Hwy D; turn west on D for approx. 1 mile. The area entrance is on the north side of Hwy D.

### **HOURS:**

Area is open from 6 a.m. until 10 p.m. See area regulations for special hunt hours. Fishing hours are from 6 a.m. until 9 p.m. Rental boats are available April 1 through September 30. The office is open Monday through Friday from 8 a.m. until 5 p.m. and Saturday and Sunday from 8 a.m. until 4 p.m. It is closed some state holidays.

6,987 acres with 32 lakes and 40 ponds totaling 526 acres of water for fishing. There are six viewing blinds (two are wheelchair accessible), seven hiking trails totaling 5 miles, picnic area, staffed firearms range, and fishing jetties (some are wheelchair accessible). The area has interpretive programs, exhibits, demonstration sites and is used by bicyclists.

### ABOUT THE AREA:

you will be embarking on

### Maple Sugar Festival Saturday, February 16, 2002 10:00 a.m. - 2:30 p.m.

Rockwoods Reservation is inviting you and your family to take part in an old Missouri tradition - Maple Sugaring! This free event will begin in the Education Center where you will learn about some of the history behind this tradition. Then bundle up because we will be heading out to our sugar bush to collect some maple sap! Along the way learn to identify a maple tree by its buds and unlock some of the mystery behind why the maple sap is flowing. Stop by the Sugaring Shed and watch sap boil down into some tasty syrup!

Parking for this event will be at LaSalle Springs Middle School parking lot (located on Highway 109) and a shuttle will bring you to the Education Center. This special event is made up of multiple stations, the first beginning in our classroom. For more information, call (636) 458-2236. Note: In case of severe weather, this program will be cancelled.

**Making Tracks** 

News from

February 2002

### Reservation

Tf you're like me warmer days could not come any sooner, battling bouts of cabin fever, and starting to think Jimmy Buffet had the right idea with the improvements of the freezer. Relish in the knowledge that February sun brings warmer days and for a few short weeks that sun brings magic to your own backyard!! Maple Sugar Magic, that is!

On warm February days when the temperature rises above 40 degrees and the ground is all mushy, maple trees release their sugary sap from its winter storage sites inside the roots. Sap begins pumping up the tree and into the limbs to feed the newly growing leaves encased in their buds. It is at this time that we can tap the maple trees and take some of that sugary sap to create our own sweet February treat. For those of you that have ever wanted to share some Laura Ingalls Wilder moments with your family, now is the time. Curl up with kids and read some excerpts about maple sugaring from Little House in the Big Woods to get the kids excited about the adventure

Find that gorgeous maple tree in your backyard, the one that is so nicely shaped. Please choose a tree in your own backyard or ask the owner of the property before tapping. Remember, you should always ask before tapping trees in parks or conservation areas. Choose a tree that is at least 6 inches diameter; if you tap one smaller than that you will take

### **Backyard Magic** in February

by Keri Lanning, Naturalist

away too much sap from the tree and end up stunting the growth or possibly killing it. Using a 7/16" bit, drill a hole about 2-1/2" into the bark. Drill at a slightly uphill angle so the sap easily drips out. You can either buy a spout or make your own out of a whittled down 1/2" dowel with a hole drilled down the center. Then attach a bucket to the tree to collect sap. You can use a milk jug, coffee can, or be fancy and buy a real maple sap bucket.

Collect the sap daily, you'll be surprised how much you

collect on warm days. Treat collected sap like milk. When you start the boiling down process there are a few things to keep in mind. Maple sap is about 3 percent sugar, meaning for every 40 gallons of sap you will get 1 gallon of syrup. When you boil that sap down there will be lots of water vapor! You may want to try boiling it down outside at first to save that wallpaper in your kitchen not to mention saving yourself from cleaning the mess! Syrup will be formed when the boiling sap starts to thicken and reaches a temperature of 7 degrees above boiling water. Once you have enough sap for the year or the season is over, simply pull the spouts out of the tree. The tree will heal itself in about one or two

Good luck tappin' and if you would like additional information join us at our Maple Sugar Festival February 16 at Rockwoods Reservation from 10:00 a.m. until 2:30 p.m. For a great reference book and guide to the backyard sugaring process try picking up Backyard Sugarin' by Rink Mann.

years.

### **AREA HOURS:**

Sunrise until 1/2 hour after sunset.

### VISITOR CENTER **HOURS:**

Open seven days a week all year, except holidays, from 8 a.m. to 5 p.m.

### **ABOUT THE AREA:**

All facilities are free to the public including:

- \*Education Center with exhibits and interpretive programs.
- 1.898 acres of rugged, mostly hardwood forested land interspersed with springs and streams.
- \*Two picnic areas (one with charcoal grills) with drinking water, tables, and toilets.
- Seven trails (one is selfguided and wheelchair accessible) totaling more than 10 miles.

## Program FEBR B for register to M<sub>O</sub>H

Reservations are required unless otherwise specified. Reservations will be taken Monday through Friday from 8:00 a.m. to 5:00 p.m. Programs are intended for individuals and families only. If you are unable to attend a program, please call and cancel your reservation as a courtesy to those on our waiting list. Please limit requests to two programs per month, with only one to include an Ages 3-6 program. **Please be prompt.** Arrival after 10 minutes may exclude you from the program. Interpreting services are available for people with hearing loss with five days advance notice.

# **KWOODS**

For reservations, call (636) 458 - 2236

## Gardening with Native Plants **Grow Native!**

Saturday 10:30 a.m. - Noon (Ages 12 & up) If you want your garden to look like Martha Stewart's, but everything dies in your heavy clay soil, come learn about the array of showy Missouri native plants that are easy to maintain and will attract birds and butterflies to your yard. (Reservations begin January 28.)

### Homeschool Special Maple Sugar Days: 4

(Families) Would you like to take part in an old Missouri tradition? If so, join us as we collect maple sap and boil it down into delicious, homemade maple syrup. This program is outdoors and part of the trail is not stroller accessible. (Reservations begin February 4.) 2:30 p.m. 1:00 p.m. -

### Scout Discovery Table Forest Trees & Plants

(Scouts) For Brownie Girl Scouts What's Out There: Plants #4, Junior Girl Scouts Let's Get Outdoors: Earth Connection #3,4,6,8. Webelos Group: Forester #3,4.(No reservations 10:00 a.m. - 2:00 p.m. required.) Saturday

## Maple Sugar Festival

Saturday 10:00 a.m. - 2:30 p.m. (Families) Rockwoods Reservation is inviting you and your family to take part in an old Missouri tradition - Maple Sugaring!! For more information, call (636) 458-2236. See page 3 for more details. Saturday

### Homeschool Special Maple Sugar Days: 20

Wednesday 1:00 p.m. - 2:30 p.m. (Families) Would you like to take part in an old Missouri tradition? If so, join us as we collect maple sap and boil it down into delicious, accessible. (Reservations begin February 11.)

March 9, 2002 homemade maple syrup. This program is outdoors and part of the trail is not stroller

## Discovery Table-Fire Starters

will be able to make dried materials to create your own scented fire starter to take home. We have lots of stuff to recycle, so you will be able to make as many as you want! No reservations Saturday 11:00 a.m.- 2:00 p.m. (Families) We will use recycled trash and

## Outdoor

For reservations, please call (314) 231 - 3803 enter

## **Fiddles and Forest**

Come and join Michael Fraser, Master Ozark Fiddler, to learn about the history of the Forest in the Ozarks. Learn about the Scots/Irish people who settled there, as portrayed through story telling and traditional music from the region. Admission is free. Seating is limited to 20 people. (Reservations begin January 28.) 6:00 p.m. - 7:00 p.m. Monday

## Jay Henges Range & Training Center For reservations, please call (636) 441 - 4554

### Metallic Cartridges Reloading

This is a follow-up course to Introduction to Metallic Cartridge Reloading. If you are just starting or wanting to learn more on handgun and rifle reloading, this course is for you. 9:00 a.m. - Noon

# BUSC

For reservations, call (636) 441 - 4554

## Tree-rific Hike

Saturday 9:00 a.m. - 1:00 p.m. (Ages 15 & up) Join us for a 5.5 mile hike through the Missouri River hill country on the Clark Trail. We will explore and learn about the oak/hickory forests that make up most of Missouri. (Reservations begin January 15.)

## Groundhogs

9:30 a.m. - 10:30 a.m. & 11:00 a.m. - Noon **5** Tuesday

(Ages 3-6) Why does the groundhog look for his shadow? Will we have six more weeks of winter? Learn about the groundhog's habits and habitat. (Reservations begin January 22.)

## **Buzzard Business**

important role in the ecosystem and they're cooler than you think. (Reservations begin January 25.) Friday 10:00 a.m. - 11:00 a.m. (Ages 7-12) Generally speaking, vultures "get no respect," but they should! Vultures play an **S** Friday

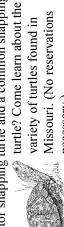

### Table Bird ID & Flyways Scout Discovery

6

(Brownies, Juniors, Wolves and Webelos) Scouts will learn about bird identification and migration flyways while working on badge requirements. (No reservations necessary.) 2:00 p.m. 10:00 a.m. -Saturday

### Table-Turtles Discovery

Sunday 11:00 a.m. - 2:00 p.m. (All ages) Can you tell the difference between an alligator snapping turtle and a common snapping Sunday

## Conservation Jeopardy

Sunday 1:00 p.m. - 2:00 p.m. (Families) Which Missouri mammal gives birth to identical quadruplets? Test your trivia skills with questions like this in a fun game of Conservation Jeopardy. (Reservations begin January 25.) questions like this in

## Conservation Book Club

Monday 7:00 p.m. - 8:30 p.m. (Adults) This month's book will be  $\overline{A \text{ Sand}}$  County Almanac by Aldo Leopold. Pick up a copy and bring your reactions, questions and observations to the meeting. (Reservations begin January 28.)

## **EEEK! A Skunk!**

9:30 a.m. - 10:30 a.m. & **20** Wednesday

 $II:00\ a.m.\ -Noon$  (Ages 3-6) Come sniff out the real facts about skunks. (Reservations begin February 6.)

### Nature Writing Workshop

N

skill levels to hone their craft. Bring several copies of your poetry, fiction, or nonfiction that relates to nature, conservation or the outdoors. (Reservations Monday 7:00 p.m. - 9:00 p.m. (Ages 15 & up) This program offers a friendly, supportive atmosphere for writers of all ages and begin February 11.)

### Crossed the West... As Lewis & Clark

26

(Ages 10-12) Lewis and Clark discovered many different animals and met many new people on different animals and met many new people on their journey up the Missouri River. Come and discover what they saw and how they traveled. (Reservations begin February 12.) 10:30 a.m. 9:30 a.m. -Tuesday

# POWDE

For reservations, call (314) 301 - 1500

## Lewis & Clark Expedition **4&25** *Monday*

naturalist who was fortunate enough to have done it. (Reservations begin January 22 & February 12 respectively.) Monday 10:00 a.m. - 11:30 a.m. (Adults) Travel the Lewis & Clark Trail vicariously with a volunteer

10:00 a.m. **4** Monday

Papermaking Workshop

(All Ages) Come on a recycling adventure into papermaking. Convert scraps of paper into beautiful homemade papers. Please bring one or two old towels. (Reservations begin January 22.)

# Tap! Tap! Tap! Woodpeckers!

Tap! Tap! Woodpeckers!

Wednesday
10:00 a.m. - 10:45 a.m.
(Ages 3-6) Come learn about those noisy birds in your neighborhood. We'll make a suet feeder too! (Reservations begin January 23.) Thursday 10:00 a.m. - 10:45 a.m. (Ages 3-6) Join us for a special valentine program to learn about and help the feathered friends in your backyard. (Reservations begin January 24.)

Valentines For The Birds

Let's Make A Nature Book

a wonderful (Ages 3-6) Begin journaling at an early age! Join us to make journal. (Reservations begin January 24.) - Noon 11:15 a.m. Thursday

### Compass Map &

9 Saturday

(Ages 10 & up) Learn how to use a compass and map. (Reservations begin January 29.) 2:00 p.m.

## Homeschool Programs

2:00 p. I:00 p.m.

Monday

Jumping Frogs and Slithering Snakes (Ages 3-6) Learn facts about amphibians and reptiles. You can even touch some. Please, no siblings under 3 this month. (Reservations begin January 29.)

Let's Hear it For the Herps (Ages 7-12) Bring your thinking cap and learn about amphibians and reptiles. You may even want to touch one. Please, no siblings under 7 this month. (Reservations begin January 29.)

## The Heat Is On!

(All Ages) The baseball Cardinals and other birds have one thing in common: they both fly south for the winter. Come wearing your cardinal red to learn about migration and make a special bird feeder to take home. (Reservations begin February 5.)

# This Isn't the Minnow...

22 Friday

(All Ages) And, it wasn't a three-hour tour either. More like 28 months. Explore Lewis and Clark as we discover some of the plants and animals that they did. Note, this program is geared for families with children. But, adults without children are welcome. (Reservations begin February 8.)

# Got an Itch to Catch That Bug

**27** Wednesday

Wednesday 2:00 p.m. - 3:00 p.m. (Adults) Are you interested in what's eating you, or just looking for a new hobby? Bring your curiosity. Learn about insects and how to collect and preserve them. (Reservations begin February 13.)
